

LEAN SIX SIGMA & THEORY OF CONSTRAINTS (TOC)

The number one priority of nearly every business is to improve its performance. The pressure to deliver results and achieve world-class status has never been stronger, yet, nearly every business finds it challenging to do so. Executives and managers must contend with many challenges: increase sales, improve quality, increase delivery, reduce cost and reduce inventory, to name just a few.

We address this challenge by bringing together three powerful approaches to improving the performance of your business. With a combined strategic use of Lean, Six Sigma and the Theory of Constraints (TOC) we can help you focus your improvement efforts on the true constraint areas in your organization that have the most potential for improvement.

In double blind studies, the combined use of the Theory of Constraints, Lean and Six Sigma, has been shown to deliver 15 times more results than just Lean alone and 23 times the results of Six Sigma alone. With this combined approach, ROI is typically 10 to 1.

We recognize that no two businesses are the same so one size does not fit all. Our approach to Lean Six Sigma & TOC is customized and unique to your specific business- with the goal of bringing greater value to you and your customers.
